

Roblon Binder Yarn

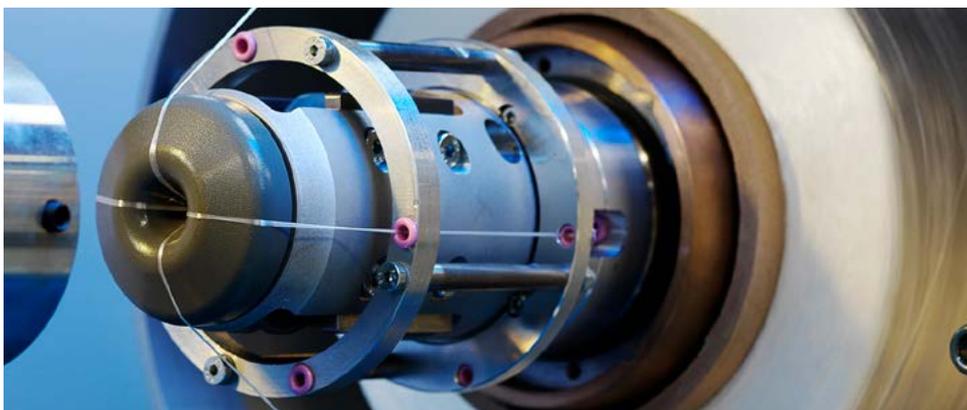

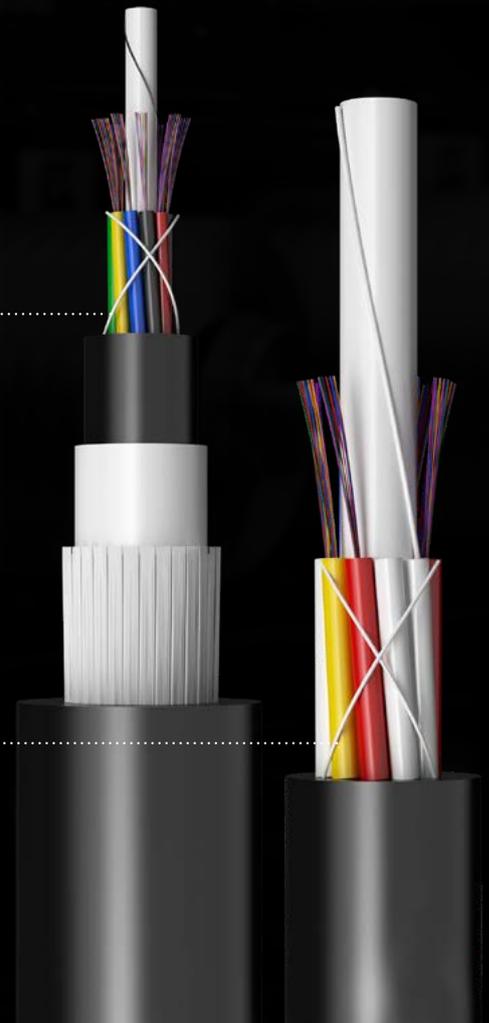

Roblon Binder Yarn is used for binding of SZ-stranded optical fibers at high speed. They are available in Low Shrinkage (LS) and Ultra Low Shrinkage (ULS) versions.

Since optical fiber cable designs are becoming more and more compact, Roblon supplies low shrinkage binder yarn as a standard. The small and compact cables offer little or no margin for material shrinkage and, therefore, Roblon offers the ultra low shrinkage binder yarn.

Roblon Binder Yarn is made of high grade polyester which ensures the constant elongation properties required for precise tension control during production. Roblon Binder Yarn can be supplied as dual-end versions. I.e. two parallel yarns are being pulled off at the same time, and this makes it possible to increase the speed by up to 50%.

- High grade polyester
- Spool may exceed 4000 rpm
- Dual-end versions available
- Ultra low shrinkage version available
- Optimal use in Roblon concentric binders

Elongation at break: 1670 dTex LS (example)

The use of dual-end yarn makes it possible to significantly increase the line speed and at the same time reduce the binding tension.
